

Landing Zone, one of InnovateEDU's products, eliminates the high cost of building and maintaining data infrastructure by providing a managed solution where we integrate all education data that's important to an education entity, together, in one place.

Landing Zone creates impact in education entities of all sizes. This means real data infrastructure tooling that can be used at a single site school all the way up to a state entity. We make it easy for education entities to gain insights on their operational data such as student attendance and edTech platform usage data to academic data such as grading works and assessment.

We offer our solution in Google Cloud in a project that sits on the customer's cloud environment. While we are building in this single tenancy fashion within the customer's cloud, we manage all resources inside of the project.

The code itself behind the product is available to all education organizations free of charge. Landing Zone's annual subscription cost covers all cloud usage, implementation, and support.

Our support covers all aspects of the Ed-Fi Platform.
