

1.3 - Create a Mapping Project

Problem

Once Steps 1.1 and 1.2 have been completed, both the target data standard and the source data standard are loaded into MappingEDU and are ready to be aligned.

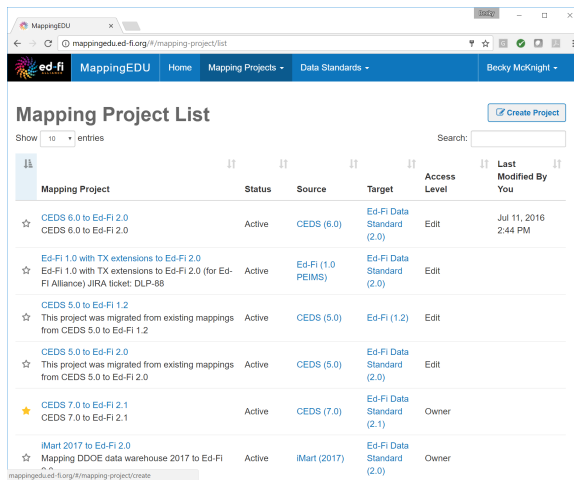

Solution

Create a mapping project to map the two standards.

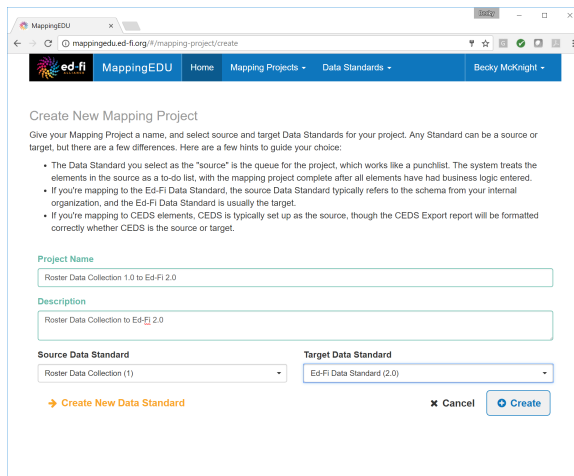

Discussion

Once both data standards are loaded in MappingEDU, creating a mapping project is as simple as selecting the standards to be aligned.

From the **Mapping Projects** drop-down, select **View All Projects**. Click **Create Project** in the upper right-hand corner.

Define the mapping project by providing a name and description and selecting the appropriate source and target data standards. Click **Create**.

To create a project without the auto mapper, click **Create Empty Project**.
