

Interchange Schema Documentation

Overview

Interchange schema define the structure for XML data files that transport data between systems. The Ed-Fi Standard Interchange Schema handle a number of common information exchange use cases such as the reporting of test results, gradebook information, student transcript information, and more. Ed-Fi Version 2.0 contains a set of twenty-one Standard Interchange Schemas. They represent field-tested schemas based on the Ed-Fi Core XSD.

Interchange Schema

Documentation for and a link to each interchange schema can be found on the following pages:
