

Deploying an Ed-Fi Development Environment in Google Cloud

InnovateEDU

Description

This tutorial will walk you through how to implement a development environment in Google Cloud Platform running Windows Server 2019 with Microsoft SQL Server 2017 Standard. You'll be able to explore the ODS to better understand the data standard and create and delete sandboxes with or without sample student data and development test scripts against the Ed-Fi API.

The development environment contains an instance of the [Sandbox Administration Portal](#) allowing you to create and delete sandbox environments of the ODS.
