Latest Release

March 29, 2021: We are pleased to release [MetaEd 2.5.1](#)

MetaEd is a technology framework that uses an Ed-Fi-aligned domain specific language (DSL) to auto-generate software, database, and data standard artifacts.

The internal Ed-Fi Alliance team uses MetaEd to define and produce core components such as the Ed-Fi Standard Interchange Schema (XSD files), the Ed-Fi ODS (SQL Scripts), and technical documentation from a single source definition written in the MetaEd DSL.

A version of MetaEd called the MetaEd IDE supports the generation of Ed-Fi Extensions and all related artifacts. The MetaEd IDE is freely available to licensees.
